One Day Webinar on

“Mitigating Risks of Ransomware Attack”

13th June 2022

About the Workshop

The Ransomware attacks are increasing day by day and is becoming major threat to the nations' cyber space. Ransomware has become one of the fastest growing cyber threats with an increase of 62% in the year 2021. Around 120 different new ransomware variants were detected in the last one year and it is expected to rise in the future. The manufacturing, health care, media, energy, public sector and financial services sectors were affected by the Ransomware attacks in the recent years. In this scenario to protect the data and services provided by an organization, it is important to ensure that the systems and infrastructure are secured from ransomware attacks. This one-day webinar will give participants an insight of the ransomware attack vectors, campaigns, operational details, defence tactics to deal ransomware attacks and standard operating procedures in case of a suspected attack. The need for defence in depth and backup procedures will also be highlighted in the webinar.

Topics to be covered	Speakers from R&D Labs, Academic Institutions and Industry
• Introduction to Ransomware	
• Defend Ransomware and Protect Data/Services	
• Best Practices to Prevent Ransomware attacks	
• Backup Strategy for Ransomware Attack Recovery	
• Ransomware Attack – Incident Handling
